Social Interventions Research & Evaluation Network

- We are recording this webinar. The recording will be available on the SIREN website (<u>https://sirenetwork.ucsf.edu</u>) next week.
- Please submit questions in the Q&A box and technical questions in the chat box.

Social Interventions Research & Evaluation Network

This webinar is funded through a Patient Centered Outcomes Research Institute® (PCORI®) Eugene Washington PCORI Engagement Award (7255- UCSF).

The views presented in this webinar are solely the responsibility of the presenters and do not necessarily represent the views of PCORI®, its Board of Governors, or Methodology Committee.

Moderator

Speakers

Dawn Alley, PhD *HHS Office of the Secretary* Deputy Senior Advisory for Value-Based Transformation

Caroline Fichtenberg, PhD, MS

Social Interventions Research & Evaluation Network Managing Director

Kamila Mistry, PhD, MPH Agency for Healthcare Research & Quality (AHRQ) Associate Director, Office of Extramural Research, Education, and Priority Populations

Social Interventions Research & Evaluation Network

SIREN's mission is to improve health and health equity by advancing high quality research on health care sector strategies to improve social conditions.

Activities include:

Catalyzing and conducting high quality research

Collecting & disseminating research findings Providing evaluation, research & analytics consultation services

SUPPLEMENT TO THE AMERICAN JOURNAL OF PREVENTIVE MEDICINE

Identifying and Intervening on Social Needs in Clinical Settings: Evidence and Evidence Gaps

GUEST EDITORS

Nancy E. Adler and Laura M. Gottlieb

SPECIAL ARTICLE

Improving Social Needs Intervention Research: Key Questions for Advancing the Field

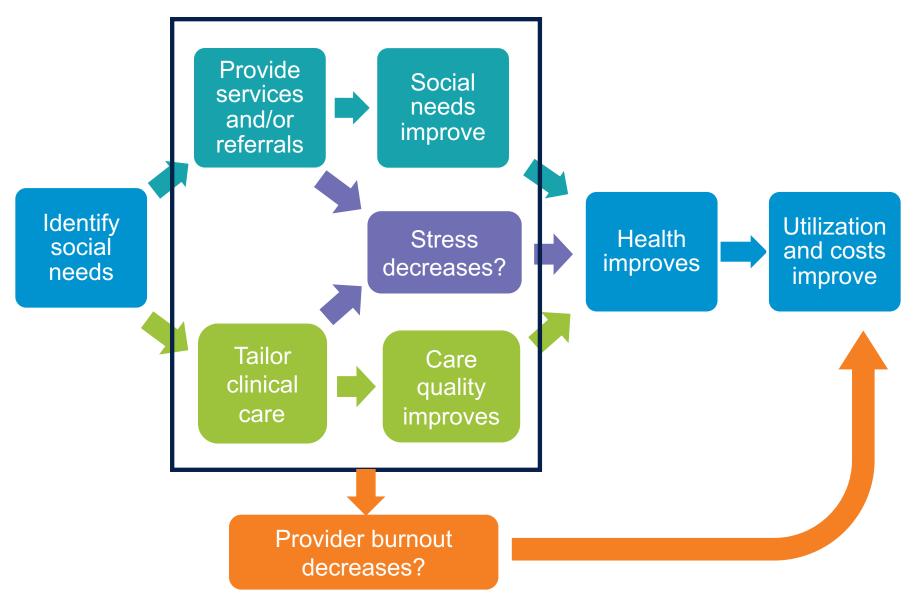

Caroline M. Fichtenberg, PhD, MS,¹ Dawn E. Alley, PhD,² Kamila B. Mistry, PhD, MPH³

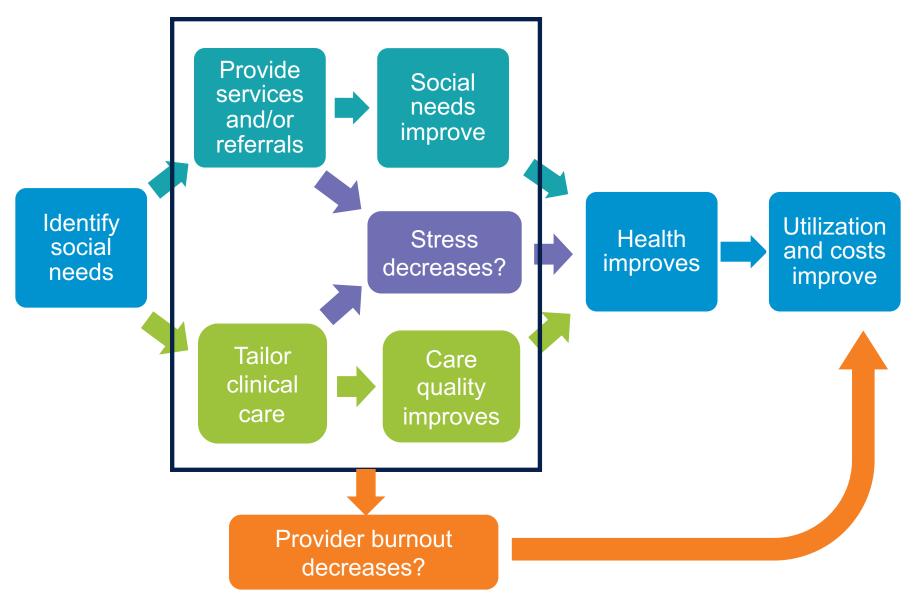

What do we know about screening?

- Several studies have found high patient acceptability overall, although some patients have concerns, especially in pediatric settings. (De Marchis et al. AJPM 2019; Byhoff et al. AJPM 2019; Rogers et al. JGIM 2020; Hsu et al. JGIM 2019; Orr et al. Clin Pediatr 2019)
- Suggestive evidence that patients may appreciate being asked about social needs even if providers don't offer any assistance. (Byhoff et al. AJPM, 2019; Hsu et al. JGIM 2019.)
- Self-administered screening increases disclosure of needs (Cullen et al. Acad Pediatr 2019; Gottlieb et al. Pediatrics 2014).

<u>Gaps:</u>

- What screening approaches maximize patient acceptability?
- Should social needs screening be standardized?
- Is screening needed or should everyone be offered assistance?

What do we know about intervention effectiveness?

 Some studies find benefits (e.g. for meal delivery programs), but evidence still very sparse.

<u>Gaps:</u>

- Do these interventions work? (How should we judge whether they work?)
- How do these interventions work?
- What are the most effective and cost-effective approaches? For whom?
- Are there unintended consequences?
- What are impacts on health equity and how can they be maximized?

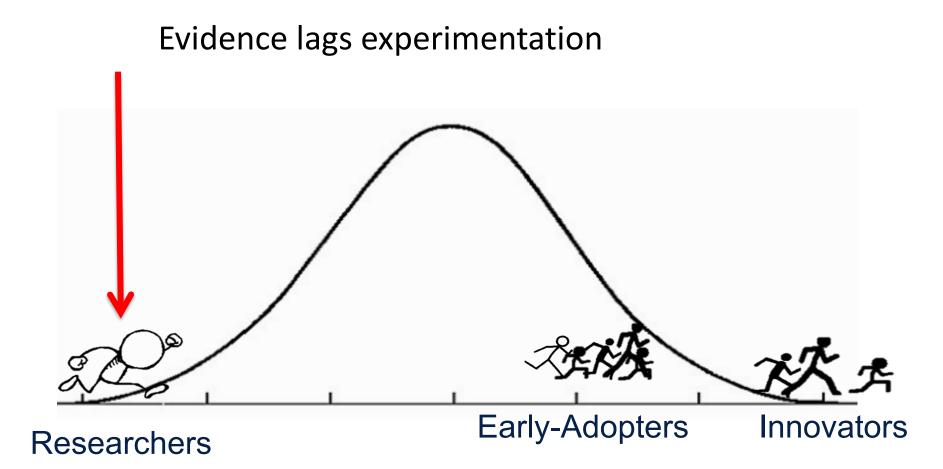

What do we know about intervention adoption?

- Provider/staff training and technology can increase screening rates
- Practice settings need a fair amount of support to implement screening
- CBOs are interested but concerned

<u>Gaps:</u>

17

- What capacity building approaches are most effective?
- How can patient engagement and participation be maximized?
- What payment and quality incentives drive adoption?
- How to avoid unintended consequences?
